

BECON Catering to the Indian market

Bhai Engineering Corporation, Ludhiana has been in the forefront in the area of concrete batching and mixing plants since the last 15 years. It has supplied over 250 concrete batching and mixing plants in the market. These plants have been used for building projects, roads, dams projects and making ready mix concrete.

Depending upon the job requirement of the customer the plants are available in different configurations and capacities between 15 to 120 m³/h which are given below.

- (i) Boom scraper type concrete mixing plant
- (ii) Mini concrete mixing plant, 15 m³/h
- (iii) In line bin storage type concrete mixing plant, 30-60 m³/h
- (iv) Central storage type concrete mixing plants, 60-120 m³/h.

The 30 m³/h boom scraper concrete mixing plant has proved to be most popular with the contractors as it helps in mechanising the whole process of making con-

crete at the work site and at the same time making quality concrete for the contractor.

With the use of these mixing plants cement / water ratios can be controlled very precisely. The plants are provided with features for batching and dozing of the following aggregates, cement, water, additive. Automatic weighing and batching with electronic are standard features with all the plants now. A lot of customers who had earlier purchased plants with manual plants earlier have converted their plants to automatic type electronic weighbatchers.

Nowadays most of the end users require a print out of every delivery report for quality control purpose. Details of all such items such as actual weight required weight, achieved weight, time, date, driver name, site address, truck number are stored in the computer. At the end of the day consumption records are kept for the company.

The batching control system

BECON concrete batching plants have a reputation for quality and negligible maintenance costs.
